

## **EFISC- making feed ingredient safety work better**

Brussels, 12 September 2011

The European Feed Ingredients Safety Certification association is proud to announce the certification of the three Bunge production facilities in Barcelona, Cartagena and Zierbena according to the EFISC feed safety assurance scheme. Together with the already certified plant of Tereos Syral in Zaragoza this is a considerable step towards feed materials safety certification in Spain's growing meat industry market, providing increased transparency and trust to its customers. When purchasing EFISC certified products the Spanish compound feeder can be assured that he buys first class feed ingredients manufactured according to the requirements of the EU feed hygiene legislation.

The European Feed Ingredients Safety Code promotes good practices in the industrial manufacturing of safe feed materials. This provides a harmonised, voluntary feed safety assurance scheme for the feed materials industry in the EU in combination with third party certification. It is based on the European Guide to good practice for manufacturing of safe feed materials, recognised and endorsed by the European Commission and the 27 EU Member States.
